

QUIET HOUSE: "A NO-BRAINER."

Jason Classen, Project Director / Southeastern, LLC.

Cast iron risers, perfectly sized to work with our PVC pipe and fittings, provide an ultra-quiet plumbing system.

"I've spent a lot of time building fine, custom homes, but there was one job that really changed the way I looked at construction. The owners had a collection of fine art and they had designed a gallery next to the kitchen where they could display it.

"As I did a walkthrough, I could see the 3" PVC stack in the wall between the gallery and the kitchen. All I could think of was of someone trying to contemplate art, while the sound of a toilet flushing roared through the walls.

"I mean that's crazy, right? Spend all that money on fine art and a fine house and you're still going to hear a toilet flush?"

"So, I went back to the owner and said, 'For the money, do you want to put in a Quiet House® stack? It's a riser of solid cast iron and you won't hear a thing.'

"When you get right down to it, a fine home is a work of art in its own right. Nobody should spend that much money on a house and hear a toilet flush in the walls.

"From that moment on, I've always recommended the Quiet House System. The cost-difference is small, and it increases the enjoyment of your house forever."
